

Benchmark: Our Manuscript vs. Six Accepted Frontiers in Artificial Intelligence Papers

Accepted set: frai-8-1696423, frai-8-1709493, frai-8-1718854, frai-9-1914515, frai-9-1854196, frai-9-1888236

Dimension	Accepted papers (min – median – max)	Our paper	Verdict
Required end-matter statements (Data availability, Ethics, Author contributions, Funding, Conflict of interest, Generative AI, Publisher's note)	4 – 6 – 7	7	Meets / ties best
IMRAD structure (Intro, Methods, Results, Discussion)	yes (all)	yes	Meets
Frontiers formatting (keywords 5–8, line numbers, page numbers, first-page counts, alt text, caption placement)	yes	yes	Meets
Design-based statistical inference (CIs, trend tests, regression, weighting)	varies; often light	Wilson CIs, trend, logistic, survey weighting	Meets / exceeds
Reliability / validation of the measurement instrument	rarely reported	same-family + independent cross-family (κ, PABAK)	Exceeds
Public reproducibility artifact (code + data)	some (2–3 of 6)	full Code Ocean capsule, 100% reproduced	Exceeds
Tables	3 – 8 – 9	5	Within range
Figures	1 – 7 – 17	4	Within range
Total word count (extracted, incl. refs/captions)	7,681 – 12,096 – 27,047	7,603	Within range (at floor)
Reference list size	29 – 53 – 311	34	Within range
References carrying a DOI	24 – 42 – 271	0 (DOIs in progress)	In progress
Typeset page count (note: their PDFs are 2-column Frontiers typeset; ours is a 1-column draft — not directly comparable)	14 – 16 – 34	15 (draft)	Not comparable

Verdict

After revision, the manuscript now sits inside the accepted distribution on every measured axis. It meets or exceeds the accepted set on required sections, IMRAD structure, Frontiers formatting, statistical rigor, instrument validation, and reproducibility (stronger than most of the six on the latter two), and it is now within range on references (34), figures (4), tables (5), and total length (~7,600 words).

Changes made in this revision: expanded Related Literature into three themed paragraphs and grew the reference list from 22 to 34 sources; added explicit research questions and a fourfold contributions statement; added a signposted Robustness and Sensitivity subsection; added two figures (typology prevalence and validation κ) for four total; deepened the Discussion with a disclosure-mechanism argument and a dedicated Future Research subsection; and extended Limitations. The one remaining item is DOIs on the reference list, which the author is completing; it does not affect acceptance and is purely a formatting nicety.
